

Aim: Our aim is to see what kind of video games students in Years 3-6 play and what ratings people play the most!

Hypothesis: Our hypothesis was that students in Year 6 play more MA15+ games than younger students and that students in Year 3 would be more likely to play PG and G rated

CALL OF DUTY

Video Games!!!!

Analysis: We found out that Year 3 students play more M and PG rated games; Year 4 students play mostly PG rated games; Year 5 students play M and MA15+ rated games the most; and Year 6 students play MA15+ A LOT. We think parents should be watching over their kids more and paying attention to the video games they are playing.

Conclusion: We come to the conclusion that our predictions were wrong and Year 3 students play more M rated games than we thought. Not many students play G rated games.

Improvements: we could have asked more specific questions in Google Forms.

We had to make sure that everyone that we surveyed plays video games so our information was valid.
