

2. What we expected
We all expected that year 6 would use the most devices and year three would use the least.

Which primary year uses the most electronic devices at St John the Baptist?

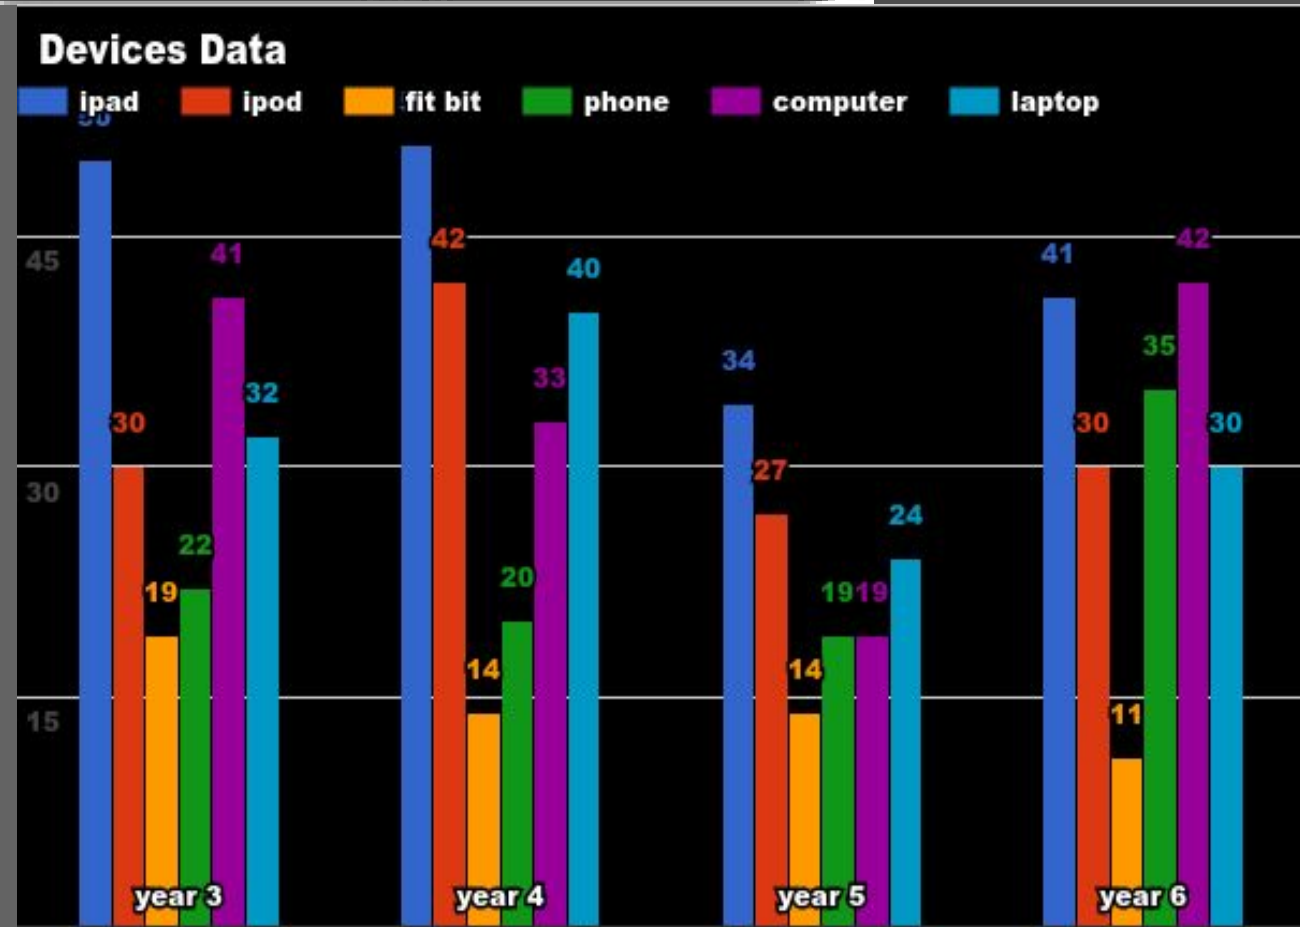

3. How we found our data:
We went around the school surveying each Year 3, Year 4, Year 5 and Year 6 classes. In total Year 3 owns 194 electronic devices, Year 4 owns 200 Electronic devices, Year 5 owns 137 electronic devices and Year 6 owns 189. Out of all the primary students in SJB, the total of electronic devices owned was 720. From all the information we gathered, we found out that Year 4 owns the most electronic devices in total, and Year 5 owns the least amount of devices.

4. There were:
176 ipads
129 ipods
58 fitbits
135 computers and
126 laptops
Out of year 3, 4, 5 and 6

The problems we had during this project were:

We had a hard time collecting data due to not all the classes were in their class when we were assigned to do our project. Also, some teachers didn't have time for us to survey their classes.

Things we enjoyed:
We enjoyed working together as a group. We also enjoyed doing the assignment and gather the information. It was nice to work with each other every week to create a project that we found creative and challenging.

As we did this project we realised how we take devices, these days for granted. We think devices are very useful nowadays because they help us to communicate with our friends, it helps us with our work and research and many more.
